SEFAR Architecture fabric&glass

SEFAR Architecture VISION | fabric & glass is a range of high precision fabrics, made from synthetic black monofilament yarn, metal coated, at least on one side coated and optionally printed.

Product Information

Application

SEFAR Architecture VISION fabric is part of a glass laminate, covered in-between two panes of glass and two interlayer foils, fully embedded and protected towards environmental influences. Applicable for flat, as well as for curved glass. SEFAR Architecture VISION fabric is part of a glass laminate.

For exterior and interior applications such as:

Benefits

Besides the outstanding, lively 3-D appearance of the fabric and it's unique one-wayvision effect, SEFAR Architecture VISION provides a number of clear additional benefits for architects, designers, engineers, owners and users of buildings with glass applications.

The fabric's open area determines the degree of energy transmission and transparency. In addition, the metal coating and color is also instrumental for the reduction of energy transmission.

Color samples or customer specific colors

By means of digital printing, the coated fabric sides can be decorated with individual designs or any specific color. In addition to the one-side coating and printing, both sides can be coated and printed (e.g. for glass-fins or -louver, glass partition walls), even with different colors or designs, without any showthrough on the reverse side.

One-way-vision effect

The so-called one-way-vision effect is obviously the main aspect of the product. It provides an exceptional range of design possibilities on the outer face of the glass pane for architects and façade designers, on the basis of a unique, exciting and lively 3-D appearance – without disturbing the view from the inside to the outside. Find it out by sliding the pictures:.
